
Verification of $H(f)$ and its period $1/\gcd(\tau_i) = 250$ MHz
Magnitude: closed form vs. FFT of $h[n]$ (red dashed: $f = 0$, one period on each side)
$H(f)$, closed form
200-point FFT of $h[n]$
$|H(f)|$
Phase: closed form vs. FFT of $h[n]$
$\angle H(f)/\pi$
Left half shifted by $F_s = 250$ MHz lands on the right half
$|H(f)|$
$|H(f + 250\,\text{MHz})|$
$|H|$
Frequency f (MHz)
