
Estimated channel $H[k] = Y[k]/X[k]$ ($N_g = 64$) vs. Q3(c)
Magnitude
$|Y[k]/X[k]|$
$|H(f_k)|$ of Q3(c), every 4th k
$|H[k]|$
Phase
$\angle H[k]/\pi$
Estimation error vs. CP length (channel memory $L - 1 = 50$)
$|H[k] - H(f_k)|$
$N_g = 32$
$N_g = 49$
$N_g = 50$ and 64 (identical)
Subcarrier index k
